PROFESSIONAL SUMMARY

Computer Science graduate (Second Class Honors) who completed the SDA & WeCloudData Agentic AI Engineering Program, with hands-on experience building, containerizing, and evaluating LLM agents in Python, LangChain, FastAPI, and Docker. Skilled in tool-calling, multi-step orchestration, RAG pipelines, and LLM evaluation with DeepEval, Ragas, and promptfoo. Team lead on two AI projects, including a four-person multi-agent capstone, now seeking an agentic AI engineering role designing and building reliable, secure, and production-ready AI systems.

EDUCATION

Bachelor of Science in Computer Science | Royal Commission for Jubail and Yanbu – Jubail Industrial College
08/2021 – 05/2026 | GPA: 3.67/4.00 (Second Class Honors)

EXPERIENCE

Agentic AI Engineering Program (Trainee) | SDA & WeCloudData – Remote
08/2026 – 09/2026

- Built agentic AI systems with LangChain and the OpenAI API, implementing tool-calling, multi-step workflow orchestration, and API/data integration for enterprise automation.
- Developed retrieval-augmented generation pipelines using FAISS vector indexing over large corpora, tuning chunking and retrieval parameters to improve relevance and reduce latency.
- Benchmarked and evaluated LLM outputs for accuracy, faithfulness, and consistency using DeepEval, Ragas, and promptfoo, tracking results across model and prompt configurations.
- Packaged and served agent services with FastAPI and Docker; published reproducible code to version-controlled GitHub repositories.

IT Intern – Manufacturing Operations Management (MOM) | Sadara Chemical Company
01/2026 – 05/2026

- Supported enterprise applications critical to manufacturing operations, contributing to system reliability, availability, and continuity.
- Built ServiceNow dashboards to monitor system performance, SLA compliance, and operational metrics for production support teams.
- Investigated software issues through log analysis and root cause analysis, supporting timely troubleshooting and resolution.
- Tested and validated enterprise integrations on Microsoft BizTalk Server and produced technical documentation for ongoing maintenance.
- Completed rotations in Infrastructure and Information Protection, gaining exposure to VMware virtualization, system administration, and enterprise security.

PROJECTS

Harf – Arabic-Aware LLM Gateway (1st Place, VentureX Hackathon 2026) | King Saud University
09/2026 – 10/2026

- Won 1st place (Cloud & Infrastructure track) with a three-person team: a gateway between apps and LLMs that normalizes dialectal Arabic, detects intent (multilingual-e5 embeddings + character n-grams), and routes requests to approved memory, gpt-4.1-mini, or gpt-4.1.
- In a blind LLM-judged test of 183 Arabic customer-service questions through the OpenAI API, cut cost by 36% at near-identical quality (4.92 vs. 4.94/5); memory answers were 30/31 correct and 29× faster, versus 49% precision for a generic semantic cache.

AI Trend Agent – Agentic AI Capstone (Team Lead) | SDA & WeCloudData
08/2026 – 09/2026

- Led a four-person team across four workstreams to build a multi-agent system that monitors GitHub and RSS signals, clusters and verifies emerging tech trends, and produces evidence-backed curriculum recommendations.
- Set the technical architecture, assigned tasks, and ran team communications: six OpenAI function-calling agent tools, a ReAct verification loop, and a two-axis reliability/importance scoring model.
- Built hybrid semantic plus identifier-based RAG over slides, PDFs, and notebooks in Chroma after pure semantic search missed rare identifiers, and added identifier-first clustering to prevent false trend merges.

Graduation Project – Diabetic Retinopathy Detection (Team Lead) | Jubail Industrial College
08/2025 – 01/2026

- Led the project team to design and train a Convolutional Neural Network to classify diabetic retinopathy severity from retinal fundus images, applying preprocessing and augmentation to improve robustness on limited data.
- Directed benchmarking using accuracy, precision/recall, and confusion-matrix analysis, iterating on architecture and hyperparameters to reduce misclassification.

SKILLS

Agentic AI: LangChain, LangGraph, OpenAI API (function calling), ReAct agents, multi-agent orchestration, LLM routing, prompt engineering
RAG & Evaluation: FAISS, Chroma, hybrid retrieval, DeepEval, Ragas, promptfoo, model benchmarking, logging and monitoring
ML & Languages: Python (PyTorch, TensorFlow), SQL, Java, C/C++, JavaScript
Infrastructure & DevOps: Docker, FastAPI, Git/GitHub, AWS, VMware, Linux, Flask, React
Databases & Platforms: PostgreSQL, MySQL, MariaDB, ServiceNow, Microsoft BizTalk Server

CERTIFICATES

Machine Learning (DeepLearning.AI, Stanford) • Google Data Analytics Professional Certificate • KAUST-NCA Cybersecurity Training Program
